

ClonMag™ mRNA Purification Kit

Catalog No: tcpk2991

Available Sizes

Size: 1Set

Specifications

Application:

mRNA Purification

Research Area:

Molecular Biology

Component:

1 ml ClonMag™ Streptavidin Biotinylated Oligo (dT)25 complex (10mg, suspended in 50nM Tris HCL, pH 7.2, 2.0M NaCl, 0.02% NaN₃)

5 ml 2X Hybridization Binding Buffer

15 ml Hybridization Wash Buffer

1 ml Release Solution

Storage Instruction:

store at 4 °C for 1 year ; Long Term store at -70 °C

Product Description

ClonMag™ mRNA Purification Kit is designed specifically for the isolation of pure, intact mRNA from purified total RNA utilizing magnetic separation technology. The isolation takes 15 minutes or less. The kit contains all the reagents necessary to isolate a typical range of 30-65µg of high quality mRNA in a single round of isolation. Increased yields are obtained from pooling multiple rounds of mRNA isolated from the same sample, using the same particles.

ClonMag™ mRNA Purification contains 1ml (10mg) of ClonMag™ Streptavidin Biotinylated Oligo (dT)25 Complex. is an aqueous suspension of 5 micrometer diameter, 50 nanometer pore diameter, superparamagnetics, totally porous glass particles with streptavidin covalently coupled to its surface and preloaded with Biotinylated Oligo (dT)25 at a level optimized for maximal mRNA yield. This Purification Kit contains all reagents necessary to isolate and purify from 30 - 70 ug of high quality mRNA (using mouse liver total RNA) from single round of isolation.

All products are for RESEARCH USE ONLY. Not for diagnostic & therapeutic purposes!
